

CELEBRATING

30 *Years*
OF PRODUCTION

A LEGACY OF GROWTH

Since 1991, PPGPL's production capacity has steadfastly increased, enabling us to grow into a globally minded organisation with the largest gas processing facility in Latin America and the Caribbean. Our growth is and continues to be underpinned by a robust safety culture, for which we have received numerous international accolades.

For the past 30 years, PPGPL's production has helped propel our country's natural gas industry to exceptional heights, exemplifying the boundless potential of Trinidad and Tobago's energy sector.

We thank our board of directors, our management and especially our valued employees for propelling us to continue growing our production assets beyond our borders.

We thank our numerous stakeholders, including our contractors for consistently contributing to our success.

We look forward to many more years of safe production, growth and achievement!
